

MIRROR MISSION CITIES HUB ROMANIA

M100

Authors: UEFISCDI, ROMANIA

M100 is a national project through which Romania coordinates its efforts to achieve the climate neutrality targets set at the European level. M100 is a Mirror Mission of the EU Mission 100 Smart and Climate Neutral Cities by 2030, through which cities in Romania are assisted in their green transition process.

M100 symbolizes commitment to a broader vision - one that extends beyond the limits of these cities and aims to create a wave of sustainability and innovation across the entire country.

APPLICABILITY IN THE WIDER DANUBE REGION

National platforms such as M100 are instrumental in driving collaborative efforts among cities towards achieving climate neutrality by 2030 and beyond. The lessons learned from the M100 initiative can be adapted and applied to other cities along the Danube, encouraging a collective approach to climate neutrality:

- Inter-Ministerial Collaboration
- Sharing Best Practices
- Community Engagement
- Funding Opportunities

M100 is a flagship project, not only at the national level, but also stands among the few initiatives of its kind in Europe

Together, we can demonstrate that we are part of the European transformative force generating solutions for complex issues
